Subject: TLIA Board position on solar panel ordinance

To whom it may concern,

We are hereby submitting the TLIA Board official position on the Solar Panel Ordinance. By submission of this position, we are stating our objection to allowing the ground mounted solar panels to be installed in Tower Lakes. It is our contention that the panels will obstruct the openness and views of the lake and overall landscaping that exists for all residents to enjoy within the community.

There are other technological alternatives that exist such as roof solar panels as well as new technology currently being developed including other options such as shingles that can be replaced on existing roofs. Therefore, we do not endorse any solution which utilizes ground mounted solar panels.

Best regards,  
TLIA Board
